1. Introduction

Central Registry of Securitisation Asset Reconstruction and Security Interest of India (CERSAI) is a Government of India company licensed under section 8 of the Companies Act, 2013 with Govt. of India having a shareholding of 51% by the Central Government and select Public Sector Banks and the National Housing Bank also being shareholders of the Company. The objective of the company is to maintain and operate a Registration System for the purpose of registration of transactions of securitization, asset reconstruction of financial assets and creation of security interest over property, as contemplated under Chapter IV of the Securitization and Reconstruction of Financial Assets and Enforcement of Security Interest (SARFAESI) Act, 2002.

To provide this mechanism, a web-based system was developed for registration of transaction by financial institutions. It enables lenders and other stake holders to get real time current information regarding the collateral being mortgaged by borrower which helps in preventing fraudulent transactions arising out of same asset being mortgaged with multiple lenders. It also provides potential buyers of assets with information about any encumbrances on the assets.

The functionalities and the end users of the Central Registry have increased steadily over a period of time since the Central Registry was operationalised on 31st Mar 2011. CERSAI has developed certain APIs to cater to the increased load on the Central Registry Portal as well as to provide a better end-user experience. This document provides the specifications for the Asset Based Search API.

2. Pre-requisites

In order to consume the APIs exposed by CERSAI, the following pre-requisites must be fulfilled:

1. Consumer entity must be a registered entity in the Central Registry portal.
2. Consumer entity will have to fill and submit the API Requisition Form.
3. Consumer entity must incorporate all the relevant master data required for consuming the APIs. The master data can be downloaded from the 'Downloads' section of the CERSAI portal.

3. Process Flow

The process flow for consuming CERSAI 2.0 APIs is mentioned below:

1. Any entity that wants to consume the CERSAI APIs, will have to first fill an API Registration form through the portal. The PUA users of the entity will have the authorisation for filling this form.
2. After filling in the necessary details, the PUA will submit the form.
3. Upon successful submission of API Registration Form, the system will generate following details and user will receive the same on mail mentioned in API Registration Form :
    - 3.1. A new channel key. This channel key will be required to be passed in all API requests.
    - 3.2. A new user Id and password, to be used exclusively for consuming the APIs.
    - 3.3. A new RSA key pair. The public key will be shared with the institution while the private key will be maintained in the system.

NOTE: Entities who have already performed API Registration for other APIs but want to consume Search API, then they have to perform the API Amendment.

Consuming the APIs

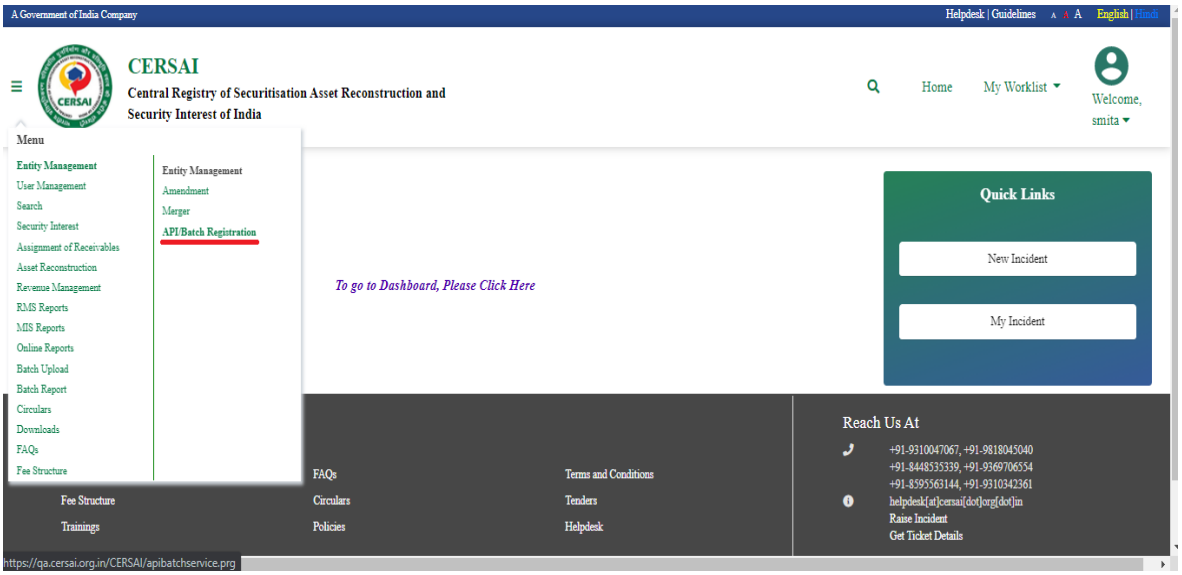
1. For consuming API, the consumer entity will have to first test the API in the non-production environment of CERSAI. Only after successfully testing the API in the non-production environment, the production environment will be enabled for the consumer entity.
2. All the APIs exposed by CERSAI will be REST APIs. The request and response payloads will be in JSON format.
3. A new unique AES256 session key and 16-byte IV parameter will have to be generated. Then, the RequestPayload (containing SearchInput) will have to be encrypted using this session key and IV parameter.
4. The header section will contain the attributes related to authentication and authorisation of the API request.
5. The body section will further contain three main attributes – 'additional info','session key' and 'request payload'.
6. The RequestPayload (containing SearchInput) will then have to be encrypted using this session key and IV parameter.
7. The session key, IV parameter and the password will have to be then encrypted using the public key shared with the entity during the API registration process.
8. Encode the encrypted data to base-64 and invoke the API.
9. The response from CERSAI will only be encrypted using session key received in the API Request and encoded to base-64.

4. Steps for Registration for API

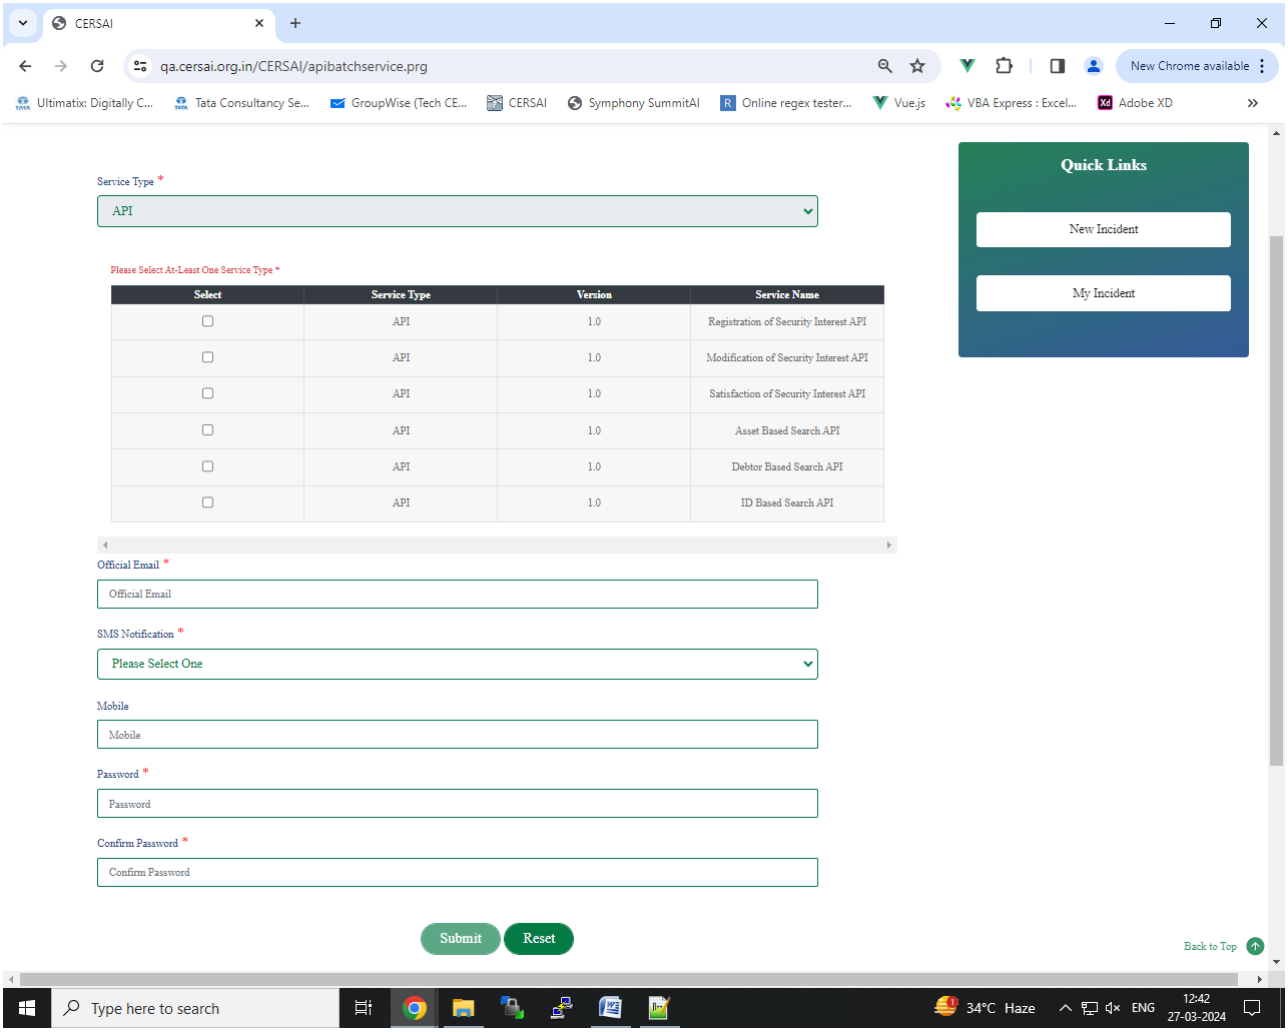
4.1 Open URL:-https://qa.cersai.org.in/CERSAI/home.prg

4.2 Login using User ID and Password of Primary User Admin.

4.3 Once login, Under Menu option, Choose API/Batch registration under Entity Management Option.



4.4 Form will open, fill the required details (Password entered on the screen will be of API user and will be used for every API request)



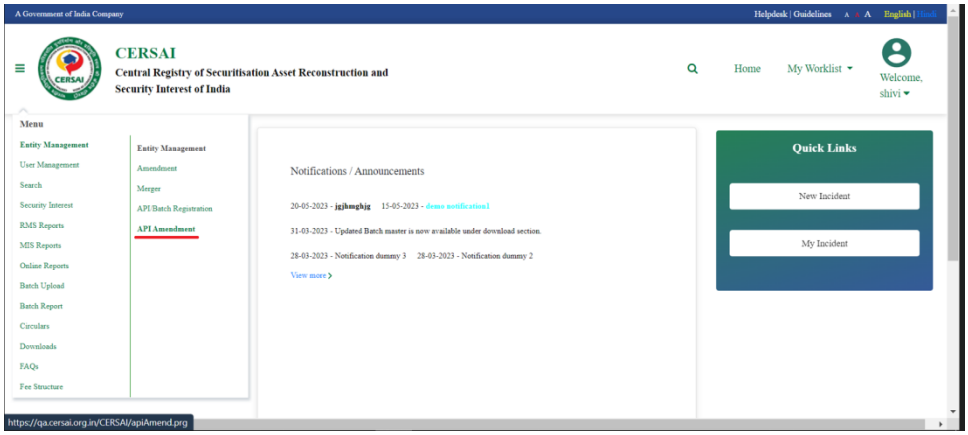
4.4 Click on Submit button once data is entered.

5. Steps for Amendment of API

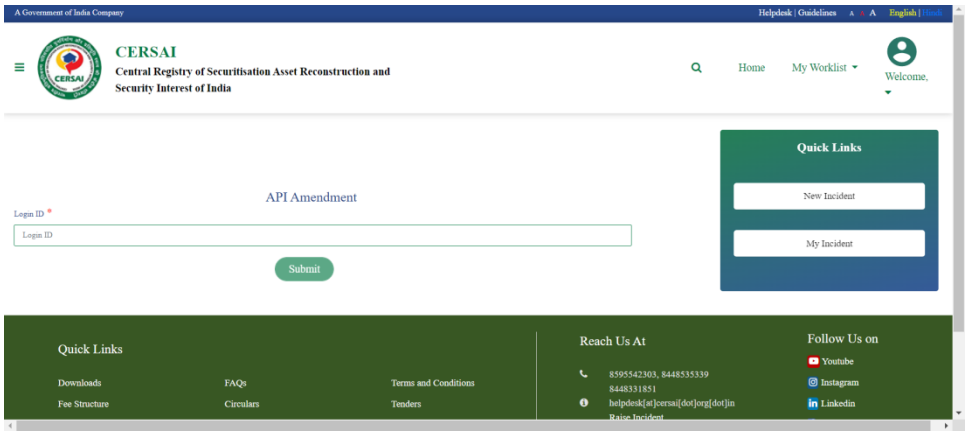
5.1 OpenURL: -https://qa.cersai.org.in/CERSAI/home.prg

5.2 Login using User ID and Password of Primary User Admin.

5.3 Once login, Under Menu option, Choose API Amendment under Entity Management option.

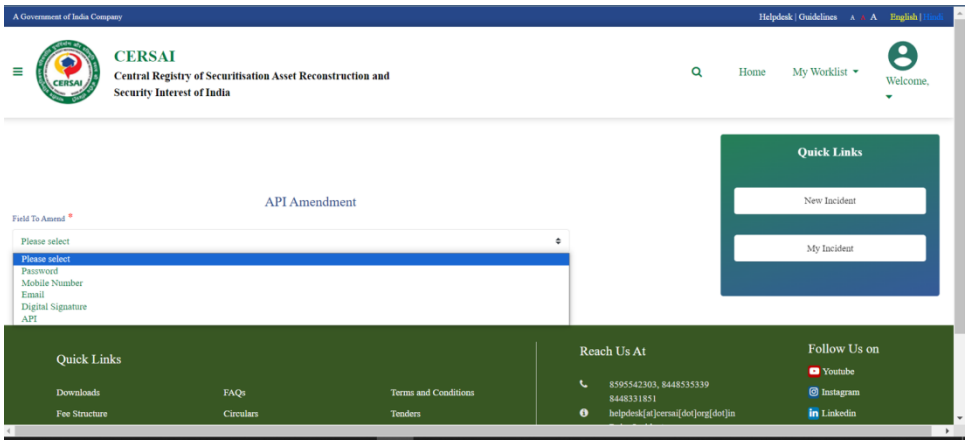


5.4 Form will open, enter API Login Id which user had received on mail after successful API Registration

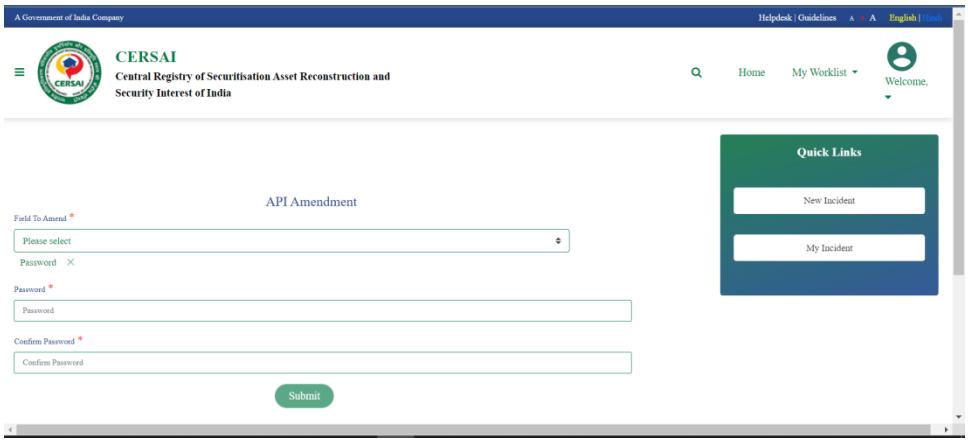


5.1 OpenURL: -https://qa.cersai.org.in/CERSAI/home.prg

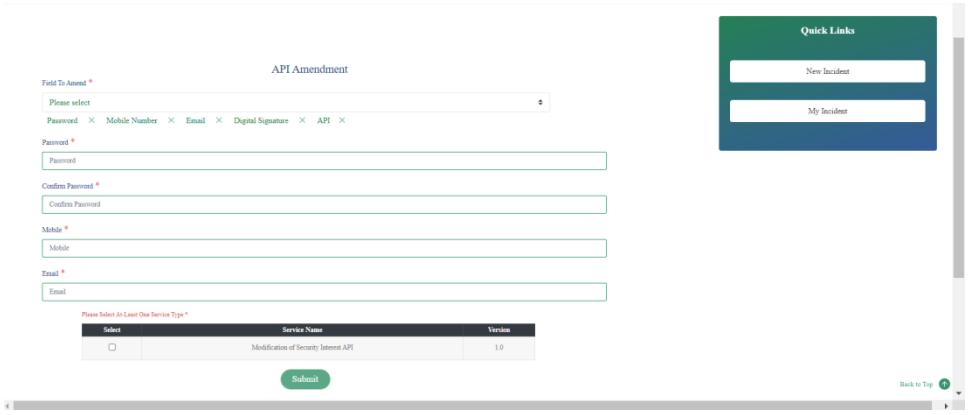
5.6 Form will open, select the field which is you want to amend.



5.7 Once field is selected, form will open, if Password field is selected to amend.



5.8 Form will open, if all fields are selected to amend.



5.9 Click on Submit button once data is entered.

5.10 User will get the following message:

Your API has been amended Successfully and your Transaction ID is 20XXXXXXXX

6. Asset Based Search API

The Asset based search API consists of two API Services:

Asset Based Search API Service I

Service I of Asset Based Search API is the main API which will take asset details as the input parameters and will return Matching Assets. There will be a top hard-limit of 999 matching records. Fee, as applicable, will be levied by the system on invocation of this Service.

URL

The URL for the API will be shared separately with the approved entities.

7. Asset Based Search API Service II

Pre-requisites

In order to consume the Service II, the following pre-requisites must be fulfilled:

1. Service II will take a single Asset Id, from the response of the Asset Based Search API Service I, and will return the details of Security Interest(s) registered on the selected Asset Id, in response.
2. The Service II must be invoked within One hour (60 Minutes) after successfully performed the Asset Based Search
3. API Service I as the transaction Id will time-out in one hour.
4. No fee will be applicable on invoking the Service II. However, Service II of API can only be invoked once for a search transaction initiated through API.
5. Consumer entity must incorporate all the relevant master data required for consuming the APIs. The master data can be downloaded from the 'Downloads' section of the CERSAI portal.

This section describes the API for Asset Details transactions.

URL

The URL for the API will be shared separately with the approved entities.

Annexure I: Sample Requests and Responses

There are Two Types of Search option that is available to user:

(1) Asset Based Search:

1. Immovable Asset
2. Movable Asset
3. Intengible Asset

(2) Asset Details:

This section provides the sample request (unencrypted) and their corresponding response (unencrypted) for each type.

- **For Asset Based Search – Immovable – Residential - Structure with Land**

  In case of Asset Category is Immovable and Asset type is Residential and Asset Sub type is Structure with Land.
