# 1. Introduction

Central Registry of Securitisation Asset Reconstruction and Security Interest of India (CERSAI) is a Government of India company licensed under section 8 of the Companies Act, 2013 with Govt. of India having a shareholding of 51% by the Central Government and select Public Sector Banks and the National Housing Bank also being shareholders of the Company. The objective of the company is to maintain and operate a Registration System for the purpose of registration of transactions of securitization, asset reconstruction of financial assets and creation of security interest over property, as contemplated under Chapter IV of the Securitization and Reconstruction of Financial Assets and Enforcement of Security Interest (SARFAESI) Act, 2002.

To provide this mechanism, a web-based system was developed for registration of transaction by financial institutions. It enables lenders and other stake holders to get real time current information regarding the collateral being mortgaged by borrower which helps in preventing fraudulent transactions arising out of same asset being mortgaged with multiple lenders. It also provides potential buyers of assets with information about any encumbrances on the assets.

The functionalities and the end users of the Central Registry have increased steadily over a period of time since the Central Registry was operationalised on 31st Mar 2011. CERSAI has developed certain APIs to cater to the increased load on the Central Registry Portal as well as to provide a better end-user experience. This document provides the specifications for the Security Interest registration API.

# 2. Pre-requisites

In order to consume the APIs exposed by CERSAI, the following pre-requisites must be fulfilled:

1. Consumer entity must be a registered entity in the Central Registry portal.
2. Consumer entity must have a valid class III digital signature.
3. Consumer entity will have to fill and submit the API Requisition Form.
4. Consumer entity must incorporate all the relevant master data required for consuming the APIs. The master data can be downloaded from the 'Downloads' section of the CERSAI portal.

# 3. Process Flow

The process flow for consuming CERSAI 2.0 APIs is mentioned below:

1. Any entity that wants to consume the CERSAI APIs, will have to first fill an API registration form through the portal. The PUA users of the entity will have the authorisation for filling this form.
2. A valid class III digital signature is required for performing this step. This digital signature will be required for signing all the API requests and hence, need to be plugged in / present on the consuming server all the time.
3. After filling in the necessary details and selecting the digital signature, the PUA will submit the form.
4. After CERSAI admin user has successfully approved the request, the system will generate:
   4.1. A new channel key. This channel key will be required to be passed in all API requests.
   4.2. A new user Id and password, to be used exclusively for consuming the APIs.
   4.3. A new RSA key pair. The public key will be shared with the institution while the private key will be maintained in the system.

## Consuming the APIs

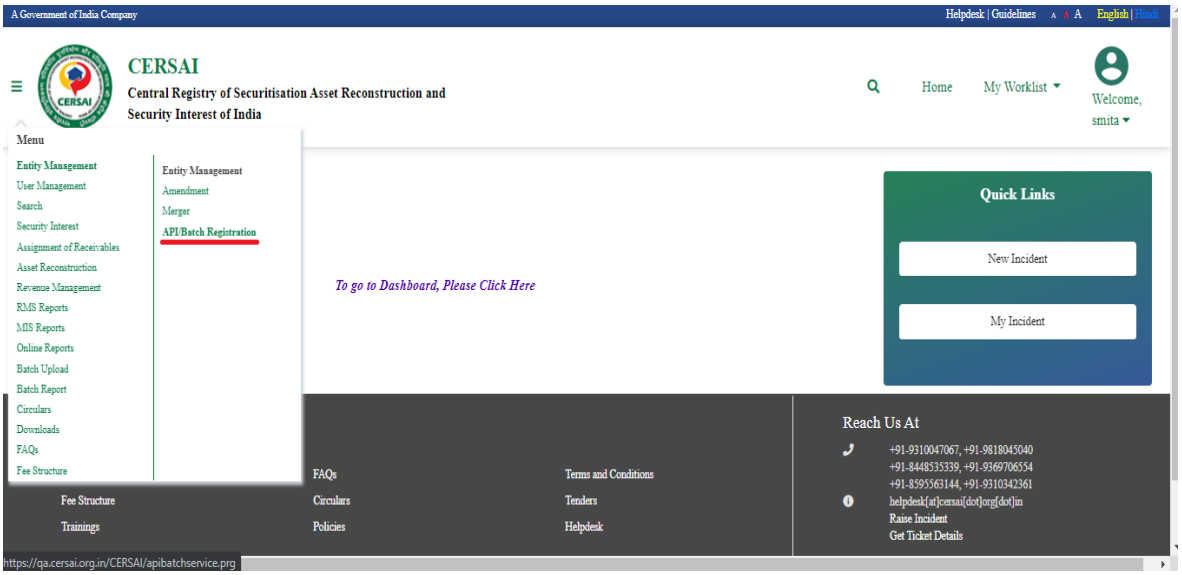
1. For consuming any API, the consumer entity will have to first test the API in the non-production environment of CERSAI. Only after successfully testing the API in the non-production environment, the production environment will be enabled for the consumer entity.
2. All the APIs exposed by CERSAI will be REST APIs. The request and response payloads will be in JSON format.
3. Each API payload will be having two sections – 'header' and 'body'.
4. The header section will contain the attributes related to authentication and authorisation of the API request.
5. The body section will further contain three main attributes – 'additional info' ,'session key' and 'request payload'.
6. For consuming the APIs, first of all, the consuming system will have to digitally sign the SecurityInterestDetails Object using the digital signature that was registered on the CERSAI portal while filling the API registration form and then pass the signed value in RequestHash attribute of RequestPayload.
7. After SecurityInterestDetails is successfully digitally signed and RequestHash is created, a new unique AES256 session key and 16-byte IV parameterwill have to be generated. The RequestPayload (containing SecurityInterestDetails and Request hash) will then have to be encrypted using this session key and IV parameter.
8. The session key, IV parameter and password will have to be then encrypted using the public key shared with the entity during the API registration process.
9. Encode the encrypted data to base-64 and invoke the API.
10. The response from CERSAI will only be encrypted using session key received in the API Request and encoded to base-64.

# 4. Steps for Registration for API

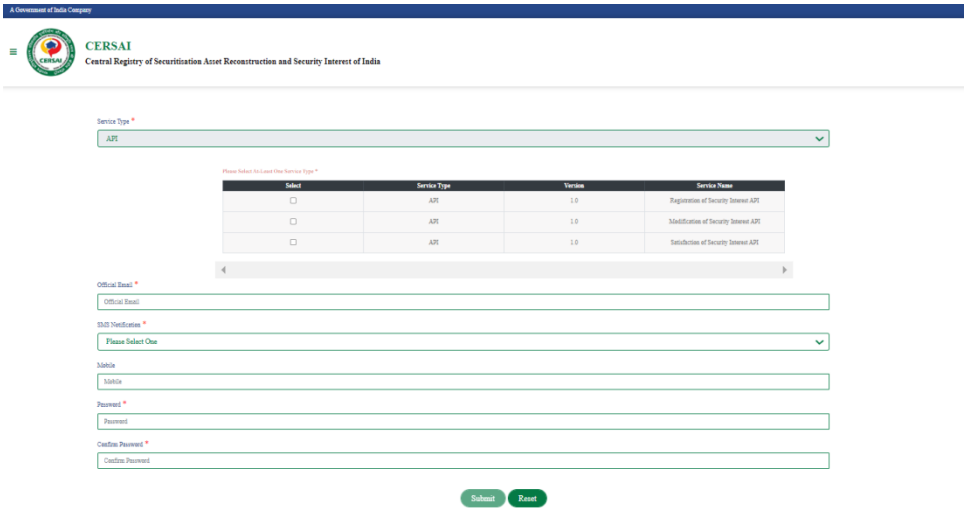
4.1 Open URL:-https://www.qa.cersai.org.in/CERSAI/home.prg

4.2 Login using User ID and Password of Primary User Admin.

4.3 Once login, Under Menu option, Choose API/Batch registration under Entity Management Option.



4.4 Form will open, fill the required details (Password entered on the screen will be of API user and will be used for every API request)



4.5 Click on Submit button once data is entered.

4.6 Pop-up for digital signature will appear where the user have to use different digital signature for the registration process as this Digital Signature will be linked to the API user and will be used in every request to digitally sign the payload of every request.

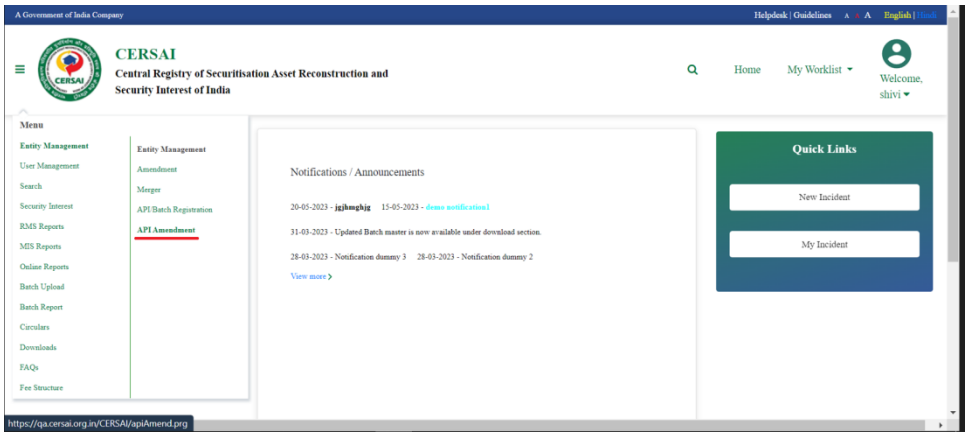
4.7 Once above steps will be done. You will get a system generated mail from our side, which include a Channel Key, RSA Public Key and API User ID.

## 5. Steps for Amendment of API

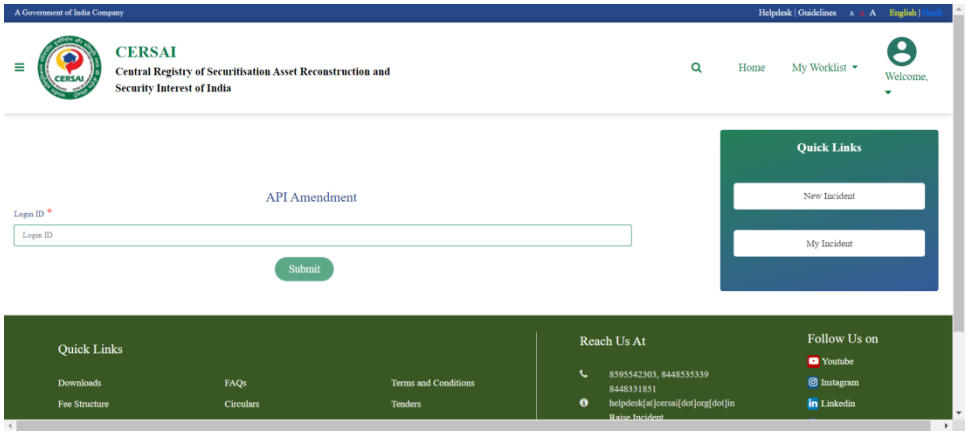
5.1 OpenURL: -https://www.qa.cersai.org.in/CERSAI/home.prg

5.2 Login using User ID and Password of Primary User Admin.

5.3 Once login, Under Menu option, Choose API Amendment under Entity Management option.

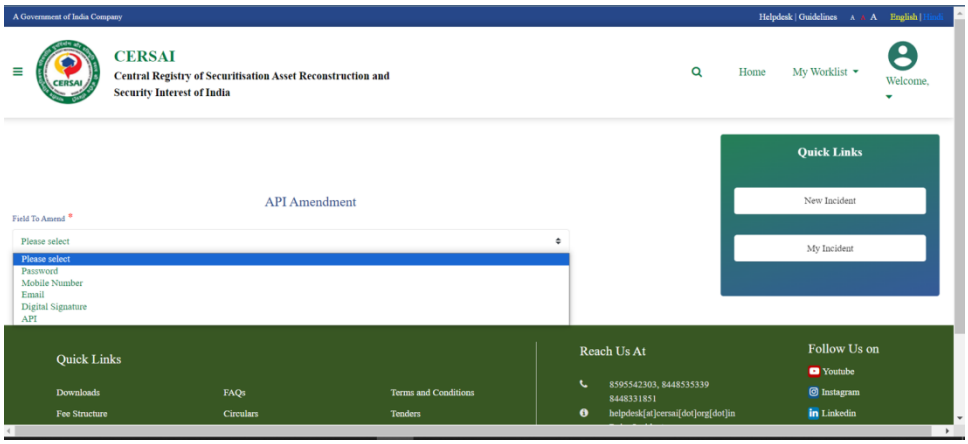


5.4 Form will open, enter API Login Id which userhadreceived on mail after successful API Registration

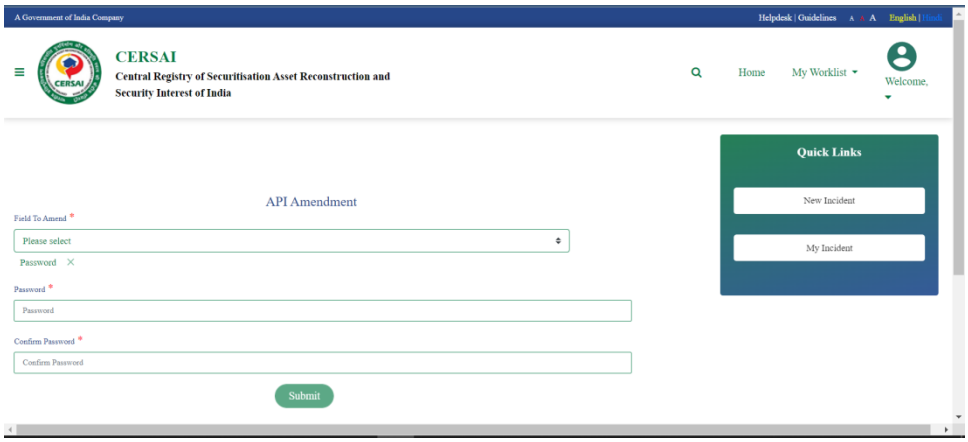


5.5 Click on Submit button once data is entered.

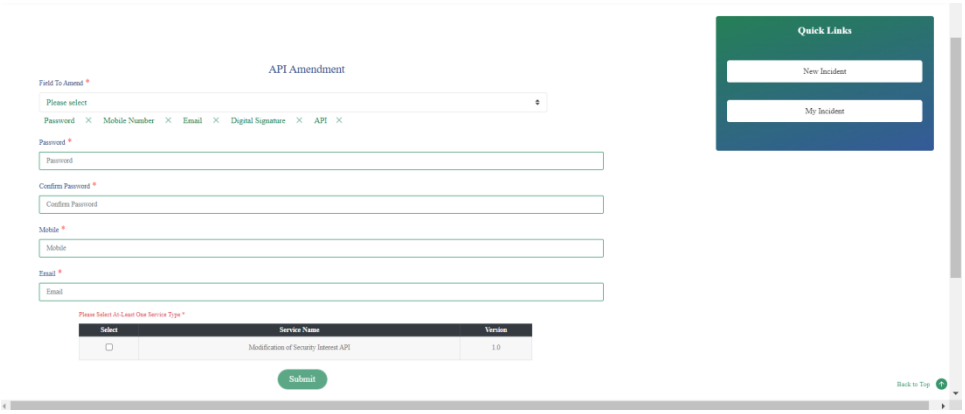
5.6 Form will open, Selectthe field which is you want to amend.



5.7 Once field is selected, form will open, if Password field is selected to amend.



5.8 Form will open, ifallfields are selected to amend.



5.9 Click on Submit button once data is entered.

5.10User will get the following message:

Your API has been amended Successfully and your Transaction ID is 20XXXXXXXX

# 6. Registration of Security Interest API

This section describes the API for registration of Security Interest / Attachment order transactions.

## URL

The URL for the API will be shared separately with the approved entities.

## API Request (Encrypted)

```
{
        "header": {
          "authinfo": {

## Note:

- In case of dedupstatus = “NM”, no further action is required at users end.
- In case of dedupstatus = “MF”
  - You can either select the asset from matching asset list and can invoke Service II (Dedup API) with dedupstatus = “S” or
  - You can set dedupstatus = “F” to forcefully register your asset while invoking Service II (Dedup API)

# Annexure I: Sample Requests and Responses

Assets in CERSAI system are categorised into three main categories:

- Immovable Assets
- Movable Assets
- Intangible Assets

Depending upon the type of Asset, these three categories are further sub-classified into 14 following sub-categories of assets:

**Immovable Assets**

1. Residential
2. Commercial
3. Other

**Movable Assets**

4. Vehicle (now suppressed)
5. Equipment and Machinery
6. Inventory (incl Receivables)
7. Other

**Intangible Assets**

8. Copyright
9. Patent
10. Licence
11. Intellectual Property Right
12. Design
13. Trademark
14. Other

Different asset sub-types have different attributes, especially in Movables and Intangibles category of Assets. This section provides the sample request (unencrypted) and their corresponding response (unencrypted) for each asset sub-type.
